DownToEarth: Can geoengineering help fight climate change? Scientists think so

"University of Cambridge has initiated first-of-its-kind Centre for Climate Repair to develop new ways to restrict solar radiation and refreeze the rapidly warming polar regions"

YaleEnvironment360: Geoengineer the Planet? More Scientists Now Say It Must Be an Option

"Human intervention with the climate system has long been viewed as an ill-advised and risky step to slow global warming. But with carbon emissions soaring, initiatives to study and develop geoengineering technologies are gaining traction as a potential last resort."

Vox: The climate renegade. What happens when someone wants to go it alone on fixing the climate?

"Enter an eccentric San Francisco-based entrepreneur named Russ George. He had spent much of his

career bouncing between ambitious environmental projects: cold fusion, reforestation, and, most recently at the time, a startup called Planktos, which focused on something called 'ocean restoration.'"
