Workshop: Solar Radiation Management: Foresight for Governance

“Solar Radiation Management: Foresight for Governance (SRM4G)” is a 3-workshop project running over the course of 2015 that will use foresight methods to construct scenarios that investigate varying contexts and contingencies surrounding “Global Responses to Climate Change in 2030”. Against this background, it will explore the capacities of a range of proposed governance mechanisms to provide oversight over the research and development of SRM technologies under alternative environmental and sociopolitical conditions.
