## **Lecture: Cold Comfort - Adventures in Climate Engineering Research**

**23. May 2016, Bristol/UK**

By Matt Watson. "Climate Engineering is the deliberate intervention in the climate system. It is moving from the realms of science fiction into mainstream scientific thinking. Although still highly controversial, some consideration has been given to the range of options that climate engineering might offer. I will explore the various options that are being investigated, and discuss, from personal experience, what it is like to work in such a difficult arena."
