## **Panel discussion: Mapping the Interdisciplinary Landscape of Climate Engineering**

**17. October 2016, Ithaca / USA**

"What do we know, what needs to be answered, and how do scholars see the topic progressing... or not? How can interdisciplinary research generate usable knowledge for decision-makers, who will have to decide which technologies and strategies have a place alongside mitigation and adaptation responses to climate change? What role have publics played in these deliberations over research and governance, and what role can they play in the future?"
