## **Workshop: Climate Engineering and Responsible Research and Innovation (German)**

**15. November 2017, Graz / Austria**

German workshop on Responsible Research and Innovation (RRI) in practice with a working group on CE.

## **Lecture: The Case Against Geoengineering: How to Build a Fair Future in a 1.5 Degree World**

**15. November 2017, Bonn / Germany**

"Geoengineering is not the solution, it just masks the problem and distracts us from real solutions: we could reduce emissions now, rather than finding ways to compensate them with technologies that carry new and even worse problems and risks."

# **Webinar: Geological Sequestration**

## **15. November 2017, Webinar**

"On November 15, the committee will conduct a webinar-based panel in advance of their workshop to provide a theoretical and practical overview of specific approaches for geologic sequestration, such as injection of CO<sub>2</sub> into submarine basalt or subsurface reservoirs below the land and ocean, as well as carbon mineralization. Specifically, panelists will explore directions for future research that would address key issues going forward, regarding cost, risk, and the potential to scale up to globally significant fluxes. An agenda and further information will follow shortly."
