Webinar: Geoengineering: A Climate Conundrum?

4. February 2020, Webinar

"Which geoengineering technologies seem most promising and which seem inauspicious? What are the legal frameworks, if any, governing the research and implementation of geoengineering? Should the policymakers addressing climate change today rely upon the technologies of tomorrow?"

Panelists will delve into these questions and explore the risks and opportunities in geoengineering mechanisms including solar radiation management (SRM) and carbon dioxide removal (CDR)."

Panel discussion: New and Emerging Policies for Carbon Capture

12. February 2020, New York / USA

"Carbon capture has emerged over the past two years as both an essential part of a climate response strategy and a new market for investors. In large part, this is due to new US policies that helps align markets to CO2 reduction and removal. One of the most important policies is a change to the US tax code, section 45Q, which creates a tax credit awarded to the capture and long-term internment of CO2. This new law has implications for US industry, innovation, clean power, and global competitiveness, and is already influencing banks, equity, and institutional investors as the next clean energy market opportunity. Understanding the law, its interpretation, and associated regulations will be critical to successful deployment of carbon capture projects in US electricity and industrial sectors."

Conference: Ocean Science Meeting 2020

16. - 21. February 2020, San Diego, CA / USA

"The Ocean Sciences Meeting (OSM) is the flagship conference for the ocean sciences and the larger ocean-connected community. As we approach the UN Decade of Ocean Science for Sustainable Development, beginning in 2021, it is increasingly important to gather as a scientific community to raise awareness of the truly global dimension of the ocean, address environmental challenges, and set forth on a path towards a resilient planet."
