THE NEW YORKER

The New Yorker: The Enormous Risk of Atmospheric Hacking

"Sometime in the next two weeks, an independent advisory committee is [expected](#) to issue a recommendation on a request from a team of Harvard scientists to fly a balloon from Kiruna, in Sweden's Lapland region."

C2G: An interview with Ambassador Franz Perrez How can multilateral processes shape the governance of climate-altering approaches?

"Addressing the global challenge of governing climate-altering approaches through multilateralism is not just possible but necessary, said Ambassador Franz Perrez during a [C2GTalk](#) interview. In the end, he says, it is in everyone's best interest to build a common understanding of the potential risks, opportunities and challenges linked to climate-altering approaches."

XPRIZE: The Four Most Important Types of Carbon Tech

"Below we explore four examples of pathways that are used to remove carbon, as well as some of the challenges that scientists, geologists, biologists, engineers, and innovators are working on to unlock each pathway's maximum potential."

The Guardian: Bill Gates: ‘Carbon neutrality in a decade is a fairytale. Why peddle fantasies?’

"After putting \$100m into Covid research, the billionaire is taking on the climate crisis. And first he has some bones to pick with his fellow campaigners..."

The Conversation: Civilization VI: Gathering Storm shows video games can make us think seriously about climate change

"A new expansion has added environmental challenges to Sid Meier's Civilization VI, the latest in a popular series of strategy video games that has been running since the 1990s. The expansion – called [Gathering Storm](#) – adds new features to the game, most notably anthropogenic climate change and natural disasters."

New Atlas: New concrete recipe improves its carbon capture efficiency

"Concrete is one of the world's most commonly used materials, and unfortunately its production is a major source of carbon dioxide in the atmosphere. Now, engineers at Purdue University have developed a new cement recipe that can absorb CO2 twice as fast as usual, hopefully turning it into a useful carbon sink."

The San Diego Union-Tribute: Chris Reed: Greens who object to geoengineering put planet at risk

"Apocalyptic warnings about climate change — such as the U.S. Geological Survey-Cornell-University of Arizona [report](#) in 2014 that the American Southwest faced a significant risk of a 35-year “megadrought” — grow more plausible and terrifying each year as new global temperature records are set and massive wildfires come to seem normal."
