Government of the UK: Press Release: PM: A New Deal for Britain

"Innovation:

- Up to £100m of new funding for research and develop a brand new clean technology, Direct Air Capture (DAC), which captures CO₂ emissions directly from the air around us. If successful, DAC technology could be deployed across the country to remove carbon from the air, helping sectors where it's tough to decarbonise such as aviation.
- To help bring forward this technology, the government is exploring options around carbon pricing and incentives, where the government may pay a price per tonne of CO₂ captured."

Lights On: A weekly newsletter tracking the climate, energy and business debate in India and beyond

"After covering the climate, science and energy beat for nearly a decade, and living in India for two years, I came to the conclusion that there is a missing piece in the way international media tells the story of our warming planet and its evolving economy."
