TechCrunch: Oil and gas giants Chevron and Occidental are backing tech to combat carbon emissions

"Carbon Engineering, a Canadian company developing technology to remove carbon dioxide from the atmosphere and process it for use in enhanced oil recovery or in the creation of new synthetic fuels, has locked in financing from two big industry backers — Chevron and Occidental Petroleum — to bring its products to market."

Forbes: Capitalism Versus Climate Change: The Case Of Carbon Engineering

"Imagine vacuuming CO₂ out of the thin air and transforming the carbon into jet fuel or gasoline. While it might seem like a sci-fi fantasy, it is actually the bread-and-butter business of an innovative firm I mentioned in an [earlier article](#), [Carbon Engineering](#)."
