Blog post by Prakash Kashwan on the Forum for CE Assessment: Should geoengineering be considered a global public good?

"“Geoengineering to be regulated as a public good” – this is the first among the five key “Oxford Principles” for the governance of geoengineering. However, ‘public goods’ means very different things to different audiences. Climate scientists, social scientists, economists, the general public, policymakers: all may carry quite different understandings of what it means to look at something as a public good.”
