Burns, Elizabeth T.; et al. (2016): What do people think when they think about solar geoengineering? A review of empirical social science literature, and prospects for future research

"In reflecting on the past decade of research, we review around thirty studies investigating public familiarity with, and views about, solar geoengineering. A number of recurring patterns emerge: (1) general unfamiliarity with geoengineering among publics; (2) the importance of artifice versus naturalness; (3) some conditional support for certain kinds of research; and (4) nuanced findings on the 'moral hazard' and 'reverse moral hazard' hypotheses, with empirical support for each appearing under different circumstances and populations."
