## **Call for Abstracts: Enhanced Weathering and Synergistic Combinations with Other CDR Methods (Frontiers Research Topic)**

**Deadline: 30. September 2021**

"This special collection encourages submissions to this broad application scheme of EW and welcomes contributions on laboratory experiments, greenhouse experiments as well as field trials. We also encourage submissions on modelling studies, as predictions about the efficiency of CDR, impacts on soil functioning and biological uptake of released elements by EW need improvements, such that in the future EW in combination with other CDR options can be applied in a sustainable way."
