Carbon A List: Why the Carbfix2 project is a big deal

"Add another milestone to 2017 for the world of negative carbon emissions. The decade old CarbFix project at the Hellisheidi geothermal plant has given birth to CarbFix2. This demonstration project integrates the world's first direct air capture plant to remove carbon dioxide from the atmosphere and store it in minerals. The overall project is a collaboration between Climeworks, Reykjavic Energy, and a number of international universities and relevant partners."
