Climate Central: Negative Emissions Key to Meeting 2°C Threshold

Response to [Sanderson, Benjamin M.; et al. \(2016\)](#). "Humans will have to not only stop emitting greenhouse gases by 2085, but also develop technology that will result in negative emissions — the removal of 15 billion tons of carbon dioxide from the atmosphere each year by the end of the century — in order to prevent global warming from exceeding 2°C (3.6°F), according to a new study."
